Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

fructuronate reductase (EC 1.1.1.57) - Salmonella enterica subsp. enterica serovar Ty
C:Species: Salmonella enterica subsp. enterica serovar Typhi
A:Note: this species has also been called Salmonella typhi
C:Date: 09-Nov-2001 #sequence_revision 09-Nov-2001 #text_change 27-Nov-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             C; Accession: AD0679

Tyoung hydroxymethyltransferase (EC 2.1.2.1) - Corynebacterium sp. (fragment)
N.Alternate names: serine aldolase; serine hydroxymethylase; threonine aldolase
C;Species: Corynebacterium sp.
C;Date: 16-Aug-1996 #sequence_revision 16-Aug-1996 #text_change 22-Jun-1999
C;Accession: I40886
R;Chlumsky, L.J.; Zhang, L.; Jorns, M.S.
J. Blol. Chem. 270, 18252-18259, 1995
A;Title: Sequence analysis of sarcosine oxidase and nearby genes reveals homologies w
A;Reference number: A57385; MUID:95355441; PMID:7543100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   glycerol-3-phospate dehydrogenase glpD, aerob induced - Mycoplasma pneumoniae (strain N;Alternate names: hypothetical protein D09_orf384

Chlumsky L.J., Zhang L., Jorns M.S.;
Sequence analysis of sarcosine oxidase and nearby genes reveals homoLogies with key enzymes of folate one-carbon metabolism.";
J. Biol. Chem. 270:18252-18259(1995).
-!- FUNCTION: INTERCONVERSION OF SERINE AND GLYCINE.
-!- CATALYTIC ACTIVITY: 5. 10 -methylenetetrahydrofolate + glycine
H(2)O = tetrahydrofolate + L-serine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           60 PYRIDOXAL PHOSPHATE (BY SIMILARITY).

Bacteriol. 175:1412-1422(1993).
-!- FUNCTION: CATALYZES THE FERROUS INSERTION INTO PROTOPORPHYRIN IX.
-!- CATALYICA ACTIVITY: Protoporphyrin + Fe(2+) = protoheme + 2 H(+).
-!- PATHWAY: Protoheme biosynthesis; last step.
-!- PATHWAY: Protoheme Subsynthesis; last step.
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: BELONGS TO THE FERROCHELATASE FAMILY.
                                                                                                                                                                                                                                                                                                   Gaps
CATALYTIC ACTIVITY: D-arabinitol + NAD(+) - D-xylulose + NADH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Yersinia pseudotuberculosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     phosphotyrosine-protein phosphatase of Adinetobacter johnsonii.";
J. Mol. Biol. 278:339-347(1998).
-:-FONCTION: Dephosphorylates ptk. May be involved in the production and the transport of exopolysaccharides.
-:-CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)O = protein tyrosine + phosphate.
-:-ENZYME REGULATION: Inhibited by ammonium molybdate, sodium orthovanadate, N-ethylmaleimide and iodoacetic acid.
-:-PATHWAY: Exopolysaccharide biosynthesis.
-:-SIMILARITY: BELONGS TO THE LOW MOLECULAR WEIGHT PHOSPHOTYROSINE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Duclos B., Cozzone A.J.;

The invention relates to Gluconobacter oxydans D-sorbitol dehydrogenase (SLDH; AAB31372) and to the gene encoding it (AAA97430). SLDH has a molecular weight of about 54 kDa and catalyses the conversion of molecular weight of about 54 kDa and catalyses the conversion of D-sorbitol into L-sorbose using NADP+ as a co-enzyme. SLDH specifically catalyses the oxidation of sorbitol, mannitol and arabitol, but does not act on xylitol, ribitol, inositol and glycerol. The invention also compasses expression vectors and host cells comprising the Gluconobacter oxydans SLDH gene, and the recombinant production of SLDH. The invention further relates to a method for preparing L-sorbose by contacting the recombinant SLDH with D-sorbitol; a process for producing 2-keto-L-gluconic acid by contacting recombinantly produced sorbose dehydrogenase and/or sorbosone dehydrogenase with L-sorbose; and a process for preparing L-sorbose cataly for producing by conversion from 2-keto-L-gluconic acid. SLDH is useful for producing L-sorbose or 2-keto-L-gluconic acid as an intermediate in L-ascorbic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform becterium, and identifying a homologue of a gene derived irom coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the

AAF71360 to AAF71750 encode the Corynebacterium glutamicum sugar metabolism and oxidative phosphorylation (SMP) proteins given in AAB79433 to AAB 79633 which are involved in carbon metabolism and energy production. The C. glutamicum SMP gene can be used in vectors cenergy production of fine chemicals, such as, an organic acid, a proteinogenic cor nonproteinogenic amino acid (preferred), a purine or pyrimidine base, a nucleoside, a nucleotide, a lipid, a saturated or unsaturated fatty cor nonproteinogenic amino acid (preferred), a purine or pyrimidine base, a nucleoside, a carbohydrate, an aromatic compound, a vitamin, a cofactor, a polyketide, or an enzyme. The presence of (I) or SMP proteins (III) encoded by them are used for diagnosing the presence or activity of corraining them are used for as subject. (I), (II), (III) or host cells containing them are used to map genomes of organisms related to interest, or evolutionary studies, in determining SMP protein regions required for for function, in modulating SMP protein activity, in modulating the mace metabolism of sugars, and in modulating high-energy molecule production con a cell (i.e. ATP, NADPH).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                            New isolated Corynebacterium glutamicum nucleic acid encoding a sugar metabolism and oxidative phosphorylation protein for production or modulation of production of fine chemicals e.g. amino acids, carbohydrates or enzymes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  LVDPAIRIVSMTITEGGYNINETTGAFDLENAAVKADLK----NPEKPSTVFGYVVEAL 172

Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by c. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lessions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contecting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the vipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SAPHO syndrome; synovitis; acne; pustulosis; hypertosis; osteomyelitis; uveitis; endophthalmitis; bone; joint; central nervous system; ELISA; inflammatory lesion; acne vulgaris; enzymelinked immunosorbent assay; dermatological; osteopathic; neuroprotectant.

nucleic acid sequence is useful in the detection and/or amplification of nucleic acid sequence, particularly to identify Lactococcus lactis or related sepecies. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and cheese.

Note: The sequence data for this patent is based on equivalent patent WO200177334 (published 18-OCT-2001) which is available in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           \delta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Вb
                                                                                                                                                                                                                                                     The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PRR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human man and amino acid sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 3;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO

prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes, their use in the discovery of novel antibiotics, the essential genes, their use in the discovery of novel antibiotics, the essential genes, themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureaus, Salmonella typhi, Klebsleila pneumoniae, Pseudomonas acruginosa and Enterococcus facealis. The invention is also useful for the identification of potential new targets in antibiotic development. The antisense nucleic acids can also be used to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein.

Contact The sequence data for this patent did not form part contactive for the printed specification, but was obtained in electronic contactive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        14;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         89 PSGKSTVRVMGALRDYLLAPADPEAVLKHLVDPAIRIVSMTITEGGYNINETTGAFDLEN 148

The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expresse proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a widely acids and antibodies and the prosent sequence represents an acceptance and the prosents and the proper provides and the prosents and the p

                    Two separate genes are capable of inducing novel polyol biosynthesis in transgenic plants. One gene is bacterial in origin, e.g. E. coli derived mtlD encoding mannitol-1-P dehydrogenase (AAQ31199). The gene for this enzyme has been described by Lee and Saier, J. Bact., 153:2, 685-692 (1983). The other gene is Iml encoding myo-inositol 0-methyl transferase, derived from a stress tolerant plant (AAQ31200).
                                                                                                                                                                                                                                                                                                                                  320

                                                                                                                                                                                                                                                                            The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The polypeptide and polynuclectide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and against for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               283 MVGDVTDWEYVKIRMLNAGHVMLCFPGILVGYENVDDAIEDSELLGNLKNYLNKDVIPTL 342

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneunoniae, Pseudomonas aeruginosa and Enterococcus facealis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to obtain antibodies capable of binding to the expressed proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The prosent sequence represents an essent and the content of the coll proliferation in the coll proliferati
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          21;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             sequence (ABA90521) and related proteins (ABB53300-ABB55621). The nucleic acid sequence is useful in the detection and/or amplification nucleic acid sequence, particularly to identify Lactococcus Lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and cheese.

Note: The sequence data for this patent is based on equivalent patent WO200177334 (published 18-0CT-2001) which is available in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             89 PSGKSTVRVMGALRDYL--LAPADPEAVLKHLVDPAIRIVSMTITEGGYNINETTGAFDL 146
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          201
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          202 FLGYAKARDP-ELAKWIEENATFPNGMVDRITPTVSAEIAKKLNAASGLDDDLPLVAEDF 260

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a method for producing a polypeptide (PI) comprising cultivating a mutant cell whose parent cell comprises a DNA sequence encoding PI, by introducing a nucleic acid construct into the genome of the parent cell at a locus not within the PI sequence, so that PI transcription, translation or secretion is reduced, and recovering PI. The method is used to produce a polypeptide, such as a recombinant or heterologous hormone hormone variant, receptor, antibody, reporter or enzyme, particularly an oxidoreductase, transferase, hydrolase, lyase, isomerase or ligase. The present sequence represents a Bacillus subtilis mannitol-1-phosphate dehydrogenase protein which has an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Producing a polypeptide using a cell for reducing the production of the polypeptide, comprises inserting DNA into the genome of the cell at a position not within the polypeptide coding sequence or a regulatory

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins,

and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fip.wlpo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  380 KVQVFWTETVRRAIEDKRDLSRIAFGIASYLEMLRGRD-EKGGTYESSEPTYGDAEWKLA 438
